2018 YEAR IN REVIEW

GET ON THE RIGHT COURSE TO FIGHT CANCER®

WELCOME

Dear Jimmy Fund Golf supporters,

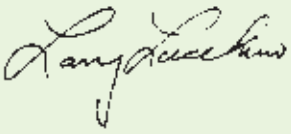
As we close another successful Jimmy Fund Golf season, I'd like to congratulate and thank you for your involvement. With your dedication and support, Jimmy Fund Golf presented by Mohegan Sun helped to raise more than $8.1 million in 2018 through 18-hole tournaments, golf marathons, mini golf events, sponsorships, and contests. As a valuable member of our community, you are changing the lives of cancer patients and their families.

Dana-Farber Cancer Institute is a leader in delivering the highest-quality patient care and remaining at the forefront of cancer research and development. This 50/50 balance results in the extraordinary level of collaboration and partnership that is essential for making profound progress against cancer in a short amount of time. As a former Dana-Farber patient and cancer survivor myself, I can say with absolute confidence that the progress happening at Dana-Farber is some of the most innovative in the world.

As chairman of the Jimmy Fund, I've witnessed firsthand the commitment of the golf community to fighting cancer. Every drive, chip, and putt from a Jimmy Fund Golf supporter this year enabled Dana-Farber to provide unparalleled care for patients today and a foundation of hope for tomorrow.

On behalf of our doctors, researchers, nurses, and most importantly, our patients and their families, thank you from the bottom of my heart for your hard work on and off the golf course to advance the lifesaving mission of Dana-Farber and the Jimmy Fund.

Sincerely,



Larry Lucchino
Chairman of the Jimmy Fund

REVOLUTIONARY CANCER RESEARCH AND COMPASSIONATE PATIENT CARE AT DANA-FARBER

- Led research that resulted in FDA approval of a new **standard first-line therapy** for newly diagnosed, advanced kidney cancer
- Found that a diet low in carbohydrates and other foods that raise insulin levels can **sharply reduce risk** of recurrence in stage III colon cancer
- Launched a **precision medicine program** for patients with advanced and aggressive thyroid cancers
- Identified biomarkers to help predict which patients will **benefit from immunotherapy,** making these treatments more effective
- Set the stage for new clinical trials to treat neuroblastoma—the most common cancer in infants—by **using CRISPR technology** to mute genes and reveal a new drug target
